

BANG H

Puzzle #3 Oh, Domino!

You should have found 5 dominos in your envelope. If you look on your info sheet, you will notice that there are 28 dominos in a standard set. If we were to tell you to ignore the lowest domino (the double zero), and the highest domino (the double six), that would leave 26 dominos. Sound familiar?

- The lower the total number of pips on a domino, the earlier in the alphabet you'll find the letter that domino represents.
- For dominos with the same pip total, the domino with the fewest pips on a single side comes first.
- Remember the double zero and the double six don't count

Once you figure out which dominos correspond with which letters, you'll be on your way. We've provided some tips to get you started Good luck!

 = A  = M

 = N  = Z

 = {unused}
